TG ACADEMY / EXECUTIVE LEARNING

CAPACITY INTELLIGENCE

WEEK 3

TG ACADEMY
www.tobamsgroup.com

UNDERSTANDING AVAILABLE TIME VERSUS ACTUAL PERSONAL CAPACITY

Why an empty hour is not necessarily usable

01

CLOCK TIME

The hour exists on your calendar, but may be surrounded by travel, care or demanding work.

02

MENTAL CAPACITY

Your ability to think clearly varies with fatigue, stress, competing concerns and recovery.

03

PHYSICAL CAPACITY

Health, sleep and energy influence how much effort is realistically available.

04

EMOTIONAL CAPACITY

Difficult conversations and responsibilities can consume attention even after they end.

PERSONAL APPLICATION • Personal example: You have 8–9 pm free, but after a demanding day a complex study task may not be realistic.

THE PERSONAL CAPACITY EQUATION

AVAILABLE TIME	Identify hours that are genuinely open after essential commitments.
USABLE ENERGY	Consider whether the hour supports deep thinking, routine action or recovery.
TASK DEMAND	Estimate the cognitive, physical and emotional effort the activity requires.
RECOVERY BUFFER	Allow for transitions, unpredictable responsibilities and basic needs.

PERSONAL APPLICATION • Capacity is not a fixed formula: use these four lenses to make a practical judgement, not to calculate a universal score.

CASE LAB: THE UNREALISTIC EVENING PLAN

SITUATION

After work and childcare, Fatima plans three hours of concentrated professional study.

WHAT HAPPENS

She begins late, feels exhausted and interprets the incomplete plan as personal failure.

RETHINK

The plan ignores transition time, fatigue and necessary rest—not a lack of ambition.

BETTER CHOICE

Choose one 25-minute study objective on suitable days and reserve a longer block at a better time.

PERSONAL APPLICATION • **Reflection:** What commitment in your week is planned for the wrong energy window?

RECOGNISING YOUR PERSONAL ENERGY PATTERNS AND PRODUCTIVE RHYTHMS

Your energy is not evenly distributed

CAPACITY IS PERSONAL

HIGH-ENERGY WINDOWS	Times when you are usually alert enough for learning, writing or difficult decisions.
MODERATE WINDOWS	Suitable for practical tasks, reading, preparation and routine commitments.
LOW-ENERGY WINDOWS	Often better for simple administration, transition or deliberate rest.
INDIVIDUAL VARIATION	Sleep, shifts, caregiving, health and circumstances can change your pattern.

PERSONAL APPLICATION • Do not assume everyone is most productive in the morning. Observe your own experience.

CREATE A SEVEN-DAY PERSONAL ENERGY MAP

NOTICE

Three times each day, rate your energy from 1 (very low) to 5 (very high).

RECORD

Note sleep, meals, demanding responsibilities and how you felt before a task.

COMPARE

Look for repeatable windows and exceptions rather than judging a single day.

ADJUST

Move one meaningful task to a more suitable window and test the difference.

PERSONAL APPLICATION • Example: If analytical work feels easier at 10 am than 9 pm, protect that window where possible.

MATCH THE TASK TO THE ENERGY REQUIRED

DEEP THINKING

Study, writing, problem-solving: use an alert window with minimal interruptions.

MODERATE THINKING

She begins late, feels exhausted and interprets the incomplete plan as personal failure.

LOW-DEMAND ACTION

Filing, preparing clothes or simple errands: use lower-energy periods where appropriate.

RESTORATION

Sleep, quiet time, movement and connection are legitimate uses of capacity.

PERSONAL APPLICATION • Activity: Choose four real tasks and place each in a realistic personal energy window.

IDENTIFYING OVERLOAD, OVERCOMMITMENT AND CAPACITY WARNING SIGNS

How overload develops quietly

1
ACCUMULATION

Small requests and recurring obligations are added without removing anything.

2
OPTIMISM BIAS

You estimate the best-case duration and overlook interruptions or recovery.

3
SOCIAL PRESSURE

Guilt, expectations or fear of disappointing others make refusal difficult.

4
UNSEEN LABOUR

Planning, remembering, caring and emotional support take effort even when invisible.

PERSONAL APPLICATION • Being overloaded does not always mean poor choices; some demands are unavoidable.

WARNING SIGNALS TO TAKE SERIOUSLY

COGNITIVE	Forgetting commitments, repeated mistakes, difficulty concentrating.
EMOTIONAL	Irritability, dread, guilt, or feeling constantly behind.
BEHAVIOURAL	Postponing important tasks, skipping breaks, cancelling recovery repeatedly.
PHYSICAL	Persistent tiredness, disrupted sleep, or feeling unable to recover.

PERSONAL APPLICATION • These are signals to review demands and seek appropriate support when needed—not a diagnosis.

THE COMMITMENT INVENTORY EXERCISE

LIST

Write every recurring responsibility, personal project and accepted request.

ESTIMATE

Include preparation, travel, transitions and follow-up, not only visible task time.

LABEL

Mark each as essential, important, negotiable or optional.

RESPOND

Identify one activity to simplify, renegotiate, defer or stop responsibly.

PERSONAL APPLICATION • Debrief: What hidden commitment consumes more capacity than its calendar entry suggests?

BALANCING MULTIPLE PERSONAL ROLES AND RESPONSIBILITIES

One person can carry several important roles

CAPACITY IS PERSONAL

PROFESSIONAL / STUDENT	Work, study, professional development and income-related obligations.
FAMILY / CAREGIVER	Children, relatives, household care and emotional responsibilities.
PERSONAL WELLBEING	Health, sleep, relationships, identity and recovery.
FUTURE SELF	Skills, financial planning and long-term goals that need gradual attention.

PERSONAL APPLICATION • A sustainable plan acknowledges roles without pretending every role can receive equal time daily.

A REALISTIC ROLE-CAPACITY MAP

FIXED

School collection, scheduled work, medical appointments or examinations.

FLEXIBLE

Study blocks, household chores, social activities and some errands.

SHARED

Responsibilities that can be fairly coordinated with available support.

UNPREDICTABLE

Care emergencies, delays, illness and other unavoidable changes.

PERSONAL APPLICATION • Write one real obligation in each category and identify which category needs more buffer.

CASE LAB: COMPETING PERSONAL OBLIGATIONS

SCENARIO

Grace has a course deadline, a parent to support and a demanding workweek.

FIRST

Protect essential care and the true course deadline; identify what cannot move.

SECOND

Break the course work into manageable sessions and ask about available support.

THIRD

Move optional plans without treating rest as the first thing to sacrifice.

PERSONAL APPLICATION • Discuss: What would a respectful, realistic week look like rather than a perfect one?

MATCHING COMMITMENTS AND GOALS TO REALISTIC CAPACITY

Capacity-based goal setting

1
DESIRED OUTCOME

Define what you want to achieve and why it matters personally.

2
MINIMUM VIABLE ACTION

Find the smallest action that still creates genuine progress.

3
REALISTIC FREQUENCY

Choose how often you can repeat it under ordinary conditions.

4
REVIEW POINT

Decide when to increase, reduce or redesign the commitment.

PERSONAL APPLICATION • Example: Instead of an ambitious daily one-hour course, start with three reliable 25-minute sessions.

THE EFFORT AND CAPACITY MATCHING MATRIX

HIGH EFFORT / HIGH CAPACITY	Place demanding work in the periods when you are most able to engage.
LOW EFFORT / LOW CAPACITY	Use lighter tasks or restoration when energy is limited.
HIGH EFFORT / LOW CAPACITY	Reschedule, divide into smaller steps or seek appropriate support.
LOW EFFORT / HIGH CAPACITY	Avoid using every strong window only on low-value administration.

PERSONAL APPLICATION • Do not equate every unused hour with wasted time: deliberate recovery is productive for sustainability.

PERSONAL PLANNING LAB: REDESIGN ONE GOAL

OLD PLAN

“I will exercise every morning and study two hours every evening.”

REALITY

Variable childcare, commute and late shifts make that plan unreliable.

REVISED PLAN

Two adaptable movement sessions and three focused learning blocks per week.

MEASURE

Track completion, perceived effort and whether the plan is sustainable.

PERSONAL APPLICATION • Activity: Rewrite one current goal to fit actual capacity without abandoning its purpose.

SETTING BOUNDARIES AND PROTECTING REST, RECOVERY AND WELLBEING

Rest is part of the capacity system

CAPACITY IS PERSONAL

PERSONAL APPLICATION • Rest is not something you must earn only after finishing every task.

SLEEP	Essential recovery that supports attention, mood and physical functioning.
MICRO-BREAKS	Brief pauses between demanding activities reduce continuous strain.
TRANSITIONS	Allow time to move mentally and practically between roles.
REPLENISHMENT	Personal connection, movement and restorative activities support resilience.

FOUR RESPECTFUL BOUNDARY CONVERSATIONS

CLARIFY

Grace has a course deadline, a parent to support and a demanding workweek.

NEGOTIATE

Protect essential care and the true course deadline; identify what cannot move.

DEFER

Break the course work into manageable sessions and ask about available support.

DECLINE

“I am unable to commit to that at the moment.”

PERSONAL APPLICATION • A boundary should be realistic, courteous and attentive to unavoidable responsibilities.

RECOVERY PLAN FOR A DEMANDING WEEK

BEFORE

Identify likely demanding days and prepare simple essentials in advance.

DURING

Schedule short breaks, realistic meals and buffers where feasible.

AFTER

Allow transition and recovery instead of filling every remaining gap.

REVIEW

Notice what restored you and what additional support may be necessary.

PERSONAL APPLICATION • Personal task: Protect one realistic recovery window and one practical boundary this week.

BUILDING A SUSTAINABLE PERSONAL CAPACITY PLAN

The personal capacity operating system

1

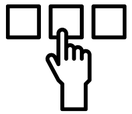

OBSERVE

Track your actual commitments, energy and warning signs.

2

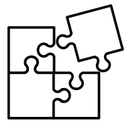

CHOOSE

Identify one to three meaningful outcomes, not an unlimited task list.

3

MATCH

Place tasks in suitable windows with realistic effort expectations.

4

PROTECT

Include recovery, transitions, boundaries and contingency space.

PERSONAL APPLICATION • Example: Instead of an ambitious daily one-hour course, start with three reliable 25-minute sessions.

A SEVEN-DAY CAPACITY PLAN

MON–TUE	Identify your heaviest commitments and schedule only essential extra work.
WED–THU	Place one or two focused personal goals in your strongest realistic windows.
FRI	Close small commitments, review what changed and avoid unnecessary carryover.
WEEKEND / REST DAYS	Protect recovery, relationships and flexible planning appropriate to your life.

PERSONAL APPLICATION • This is an illustrative structure: shift workers and caregivers should adapt it to their circumstances.

WEEK 3 REFLECTION AND PERSONAL COMMITMENT

NOTICE

What drains my capacity most and what helps restore it?

CHANGE

Which commitment will I reduce, redesign or negotiate?

PROTECT

Which realistic time and energy window will I preserve?

MEASURE

How will I know next week that my plan is more sustainable?

PERSONAL APPLICATION • Exit ticket: “I will stop assuming ___; I will protect ___; I will review ___.”

THANK YOU

Any Question?
