TG ACADEMY / EXECUTIVE LEARNING

EXECUTION INTELLIGENCE

WEEK 5

TG ACADEMY
www.tobamsgroup.com

UNDERSTANDING THE GAP BETWEEN INTENTION AND ACTION

WHY GOOD INTENTIONS DO NOT GUARANTEE RESULTS

INTENTION: You decide what matters, but a decision alone does not reserve time, energy or attention.

BEHAVIOUR: Progress begins when a specific action is performed in a realistic context.

FRICTION: Unclear starting points, emotional resistance and competing responsibilities make action harder.

FEEDBACK: Small completed steps provide evidence that improves the next decision.

PERSONAL APPLICATION: Wanting to learn a language is an intention; practising for 15 minutes after breakfast is an action.

REFLECT / PRACTISE: Where do your good intentions most often stop?

THE PERSONAL EXECUTION PATHWAY

DEFINE
Describe a concrete result: “submit my application” rather than “work on my future.”

BREAK DOWN
Identify the smallest meaningful first step that can be completed today.

PLACE
Choose a specific time and location that fit your genuine capacity.

START
Begin without waiting to feel fully confident, motivated or ready.

REVIEW
Check what happened and adjust the next step rather than abandoning the goal.

PERSONAL APPLICATION: A person preparing for an exam schedules one 25-minute practice session and names the first question.

REFLECT / PRACTISE: Rewrite one vague intention as a scheduled, observable action.

CASE LAB: THE ENDLESSLY POSTPONED GOAL

SITUATION

Leila wants to update her CV but repeatedly moves the task to “next weekend.”

BARRIER
The task feels too large; she has not defined what “finished” means.

REDESIGN
Open the existing document, update the most recent role and stop after 20 minutes.

NEXT STEP
Schedule a second short session to refine achievements and check formatting.

PERSONAL APPLICATION: The first step is not completing the entire CV; it is making credible progress.

REFLECT / PRACTISE: What would make this task easier to start tomorrow?

RECOGNISING THE REAL CAUSES OF PROCRASTINATION

Procrastination is more than poor discipline

EMOTIONAL AVOIDANCE: A task triggers anxiety, boredom, self-doubt or discomfort, so delay brings short-term relief.

UNCERTAINTY: The outcome, required standard or first step is unclear.

PERFECTIONISM: Fear of producing imperfect work prevents an acceptable first draft.

OVERLOAD: Genuine fatigue, competing care or insufficient resources make action unrealistic.

PERSONAL APPLICATION: Delaying a difficult phone call may temporarily reduce anxiety while increasing the eventual cost.

REFLECT / PRACTISE: Which cause best explains a task you are delaying?

THE PROCRASTINATION CYCLE

TRIGGER
An important task appears and feels demanding.

REACTION
Discomfort, uncertainty or fear rises.

PERSONAL EXECUTION

ESCAPE
A simpler or more rewarding activity offers immediate relief.

COST
The original task becomes more urgent and emotionally heavier.

INTERRUPT
Name the discomfort and take a small, safe first step.

PERSONAL APPLICATION • Instead of scrolling to avoid a form, open the form and answer only the first two questions.

REFLECT / PRACTISE • At which point can you interrupt your own delay cycle?

IDENTIFY YOUR PROCRASTINATION PATTERN

STARTING DELAY: You know what to do but struggle to begin.

DECISION DELAY: You repeatedly compare options without choosing.

PERFECTION DELAY: You revise endlessly because the work never feels good enough.

RECOVERY DELAY: You avoid work because rest, support or reduced demands are genuinely needed.

PERSONAL APPLICATION • Not every delay is procrastination; postponing when ill or over capacity may be wise.

REFLECT / PRACTISE • Select one pattern and a proportionate response.

BUILDING PRACTICAL STRATEGIES TO START IMPORTANT TASKS

Make starting easier than AVOIDING

1

STEP 1 TWO-MINUTE ENTRY

Begin with a tiny action: open the document, write a heading or gather materials.

2

STEP 2 IMPLEMENTATION CUE

Specify “After (existing routine), I will (small action) in (place).”

3

STEP 3 ENVIRONMENT

Remove one predictable barrier before the start time.

4

STEP 4 COMPASSIONATE RESET

If the plan fails, restart at the next reasonable opportunity without self-criticism.

PERSONAL APPLICATION • After morning tea, sit at the table and draft three lines of the personal statement.

REFLECT / PRACTISE • Which barrier could you remove tonight?

The first-15-minutes method

MINUTES 0–2: Clarify the immediate result and open only what you need.

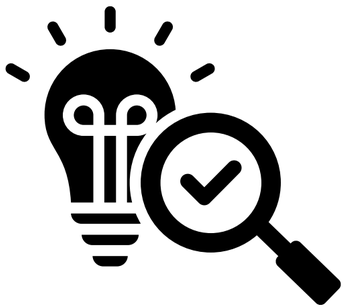

MINUTES 2–5: Create a rough first attempt without editing.

MINUTES 5–12: Continue one defined piece of the task.

MINUTES 12–15: Record progress and identify the next starting point.

PERSONAL APPLICATION • This is a flexible starter routine, not a rule to push through pain or exhaustion.

REFLECT / PRACTISE • Design your own 15-minute entry routine.

CASE LAB: A DIFFICULT CONVERSATION

AVOIDED TASK

Jon has delayed asking about a course fee because he fears hearing “no.”

FIRST STEP

Write three factual questions and identify the correct contact.

START ACTION

Send a short enquiry during a preselected ten-minute window.

REINFORCEMENT

Record the action as success even before receiving a response.

PERSONAL APPLICATION • The measurable action is sending the enquiry, not controlling the answer.

REFLECT / PRACTISE • How can you separate effort from outcomes you cannot control?

TURNING MEANINGFUL GOALS INTO MANAGEABLE ACTION PLANS

TRANSLATE OUTCOMES INTO NEXT ACTIONS

OUTCOME
State the result you want and why it matters personally.

MILESTONES
Identify two to four checkpoints that indicate genuine progress.

NEXT ACTION
Define a visible behaviour that can be completed in one session.

CAPACITY CHECK
Estimate time, energy, materials and competing obligations.

CONTINGENCY
Decide what smaller version remains possible on a disrupted day.

PERSONAL APPLICATION • Goal: complete a short course; milestone: finish module 1; action: watch lesson 1 and take notes.

REFLECT / PRACTISE • What is the next physical action for your main goal?

A 30-day persONAL PROGRESS MAP

- **WEEK 1:** Clarify the outcome, gather resources and begin the smallest useful step.
- **WEEK 2:** Repeat the action, notice friction and refine your time estimate.
- **WEEK 3:** Complete a meaningful milestone and adjust for real-life interruptions.
- **WEEK 4:** Review the result, document learning and decide the next month’s priority.

PERSONAL APPLICATION • A flexible 30-day plan is more useful than an ambitious plan that assumes perfect conditions.

REFLECT / PRACTISE • Where will you place recovery and flexibility in this map?

CASE LAB: FROM ASPIRATION TO ACTION

ASPIRATION
Priya wants to improve her financial confidence but does not know where to begin.

ACTIONS
Review statements, group spending categories and choose a small weekly review.

PERSONAL EXECUTION

MILESTONE
Understand current spending and identify one realistic savings goal.

MEASURE
Track whether reviews occurred and whether decisions became clearer.

PERSONAL APPLICATION • The outcome is improved understanding, not achieving an unrealistic financial target.

REFLECT / PRACTISE • Build a four-step action ladder for a goal you choose.

STRENGTHENING CONSISTENCY AND FOLLOW-THROUGH

Consistency is REPEATABLE, NOT PERFECT

1. **MINIMUM VIABLE ACTION**
   Define the smallest useful version for low-energy or disrupted days.

2. **RELIABLE CUE**
   Connect the action to a recurring routine instead of relying only on motivation.

3. **VISIBLE RECORD**
   Use a simple check mark or progress note to learn what is working.

4. **FLEXIBLE RECOVERY**
   Treat a missed day as information, not evidence of personal failure.

PERSONAL APPLICATION • If 30 minutes of reading is unrealistic, a focused five-minute review may preserve momentum.

REFLECT / PRACTISE • What is your realistic minimum action?

BUILD A HABIT THAT SURVIVES REAL LIFE

STEP 1 ANCHOR: Choose a reliable event such as finishing breakfast or returning home.

STEP 2 ACTION: Attach one small behaviour that supports a meaningful priority.

STEP 3 BACKUP: Plan an alternative for travel, illness or care interruptions.

STEP 4 REWARD: Acknowledge the completed action and the benefit it creates.

STEP 5 REVIEW: After one week, adapt the routine to what actually happened.

PERSONAL APPLICATION • “After lunch, I review my next important step for three minutes” is clearer than “be organised.”

REFLECT / PRACTISE • Write one anchor-action-backup plan.

THE MISSED-DAY RECOVERY EXERCISE

DAY 1: Your planned learning session happens as expected.

DAY 2: An unexpected family responsibility prevents the session.

DAY 3: You feel tempted to abandon the entire week.

RESET: Choose a smaller next action, update the plan and continue without guilt.

PERSONAL APPLICATION • Progress is not erased by a disrupted day; sustainable execution includes re-entry.

REFLECT / PRACTISE • What would a respectful restart look like for you?

USING PERSONAL ACCOUNTABILITY AND PROGRESS MEASURES

MEASURE ACTIONS YOU CAN INFLUENCE

INPUT

Did I complete the planned practice, preparation or outreach?

OUTPUT

What tangible work did I produce or finish?

OUTCOME

What meaningful change occurred as a result?

LEARNING

What helped, what blocked me and what should I adjust?

PERSONAL APPLICATION • You can control sending a thoughtful application; you cannot control the employer's decision.

REFLECT / PRACTISE • Which measure will help rather than pressure you?

THE FIVE-MINUTE WEEKLY EXECUTION REVIEW

NOTICE
Name one meaningful action completed this week.

COMPARE
Check planned actions against what was realistically possible.

EXPLAIN
Identify one barrier without turning it into a personal judgement.

ADJUST
Keep, reduce, move or redesign next week's commitment.

COMMIT
Select one clear next action and its starting cue.

PERSONAL APPLICATION • Weekly reviews should be brief enough to maintain, especially during demanding periods.

REFLECT / PRACTISE • What one adjustment would improve next week?

Personal accountability without SELF-PUNISHMENT

SUPPORT: Choose a trusted friend, journal or reminder that helps you return to your intentions.

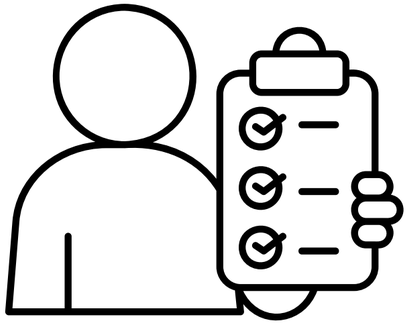

EVIDENCE: Use a simple record of completed actions rather than vague feelings of failure.

BOUNDARIES: Avoid excessive tracking that consumes more time than the activity itself.

AGENCY: Celebrate informed changes of plan as well as completed commitments.

PERSONAL APPLICATION • Accountability should increase clarity and confidence, not shame or unhealthy pressure.

REFLECT / PRACTISE • Design a two-question weekly check-in.

THE FIVE-PART PERSONAL EXECUTION SYSTEM

CHOOSE
Select up to three meaningful outcomes for the week.

PLACE
Reserve realistic time while protecting essential duties and recovery.

DEFINE
Write one next action for each outcome.

BEGIN
Use a simple start cue and a low-friction first step.

REVIEW
Check progress, learn from disruptions and adjust the next week.

PERSONAL APPLICATION • A system succeeds when it fits your real life—not when every minute is scheduled.

REFLECT / PRACTISE • Which part of your system is currently weakest?

Your daily execution RHYTHM

MORNING OR FIRST AVAILABLE WINDOW
Choose the one outcome that matters most today.

BEFORE STARTING
Clarify the next action and remove one avoidable barrier.

DURING ACTION
Work in a manageable focus period; pause or adapt when necessary.

AT DAY'S END
Record what progressed and choose tomorrow's next starting point.

PERSONAL APPLICATION • Someone with irregular shifts may use an "after waking" cue rather than a fixed 9 a.m. routine.

REFLECT / PRACTISE • Adapt this rhythm to your own daily responsibilities.

WEEK 5 ACTION PLAN: MAKE PROGRESS VISIBLE

STEP 1 PERSONAL PRIORITY
Choose one important goal that has been repeatedly delayed.

STEP 2 ACTION PLAN
Define three small steps and the conditions for starting each.

STEP 3 CONTINGENCY
Create a minimum version for days when capacity changes.

STEP 4 EVIDENCE
Record completed steps and one learning point across seven days.

STEP 5 NEXT WEEK
Carry forward what works into Week 6 Time Architecture.

PERSONAL APPLICATION • Exit ticket: “I will begin _____ after _____; my backup step is _____; I will review on _____.”

REFLECT / PRACTISE • What action will you complete within the next 48 hours?

THANK YOU

Any Question?
