TG ACADEMY / EXECUTIVE LEARNING

TIME ARCHITECTURE

WEEK 6

INTEGRATING THE SIX DIMENSIONS OF PERSONAL TIME INTELLIGENCE

FROM SIX INSIGHTS TO ONE PERSONAL SYSTEM

AWARENESS
Know where your hours go and distinguish constraints from habits.

PRIORITIES
Choose what matters before the day fills with requests.

CAPACITY
Match commitments to energy, responsibilities and recovery.

FOCUS
Protect attention for meaningful activities.

EXECUTION
Convert intentions into small observable actions.

ARCHITECTURE
Combine the five capabilities into repeatable routines.

PERSONAL APPLICATION: A sustainable system adapts to life rather than treating life as an interruption.

REFLECT / PRACTISE: Which dimension most needs your attention now?

THE TIME INTELLIGENCE INTEGRATION WHEEL

FIVE PRACTICAL WAYS TO RECLAIM CAPACITY

NOTICE: Use your Week 1 time map to identify actual patterns.

CHOOSE: Select one or two meaningful outcomes, not an endless wish list.

RESOURCE: Estimate time, energy and support honestly.

PROTECT: Reduce predictable distractions and unnecessary commitments.

ACT: Start with a defined, achievable next step.

LEARN: Review what happened and adapt your system.

PERSONAL APPLICATION • Example: someone studying while caring for family protects two flexible sessions rather than demanding daily perfection.

REFLECT / PRACTISE • Where does your current process break down?

PERSONAL CASE: A SYSTEM THAT FITS REAL LIFE

TRANSLATE OUTCOMES INTO NEXT ACTIONS

CONTEXT
Alex works shifts, cares for a relative and wants to complete a short qualification.

OLD APPROACH
Rigid daily study times repeatedly fail, creating guilt and abandonment.

NEW APPROACH
Two weekly study windows, a ten-minute fallback and a Sunday check-in.

SUCCESS SIGNAL
More completed learning sessions without sacrificing essential care or sleep.

PERSONAL APPLICATION
A sustainable system adapts to life rather than treating life as an interruption.

REFLECT / PRACTISE
What would you redesign for your own circumstances?

DESIGNING A REALISTIC WEEKLY TIME STRUCTURE AROUND PERSONAL ROLES

Start with reality, not aspiration

FIXED: Work, appointments, care, travel and essential commitments.

ESSENTIAL: Sleep, meals, health needs and reasonable recovery.

FLEXIBLE: Time windows that may accommodate priorities.

BUFFER: Unallocated space for disruptions and transitions.

PERSONAL APPLICATION • A 168-hour week is a map of obligations and opportunities, not 168 usable work hours.

REFLECT / PRACTISE • Which hours are truly discretionary?

THE WEEKLY ARCHITECTURE BLUEPRINT

STEP 1: Place fixed commitments and non-negotiable needs.

STEP 2: Identify energy patterns and realistic flexible windows.

STEP 3: Choose up to three outcomes for the week.

STEP 4: Assign short action blocks with buffer between them.

STEP 5: Create a fallback when the week changes.

PERSONAL APPLICATION • Example: a parent may protect one 40-minute early-evening window and a weekend alternative.

REFLECT / PRACTISE • What will you deliberately leave unscheduled?

DESIGN LAB: THE OVERLOADED CALENDAR

SITUATION: Mina has 40 hours of work, travel, household responsibilities and an online course.

PROBLEM: She schedules every evening for study and has no recovery time.

REDESIGN: Two planned study sessions, one optional catch-up window and protected rest.

TEST: After seven days, compare what was planned with what was possible.

PERSONAL APPLICATION • An effective calendar should reduce unrealistic promises, not simply look full.

REFLECT / PRACTISE • What would you remove from Mina's plan?

CREATING DAILY, WEEKLY AND MONTHLY PERSONAL PLANNING ROUTINES

THREE PLANNING HORIZONS, THREE PURPOSES

STEP 1
DAILY — DIRECTION

Identify the one most meaningful next action and immediate obligations.

STEP 2
WEEKLY — COORDINATION

Balance roles, priorities, capacity and realistic action windows.

STEP 3
MONTHLY — ADAPTATION

Review progress, changing responsibilities and goals that still matter.

PERSONAL APPLICATION
Planning should be brief enough to sustain; elaborate systems can become another time leak.

REFLECT / PRACTISE
Which planning horizon is currently missing?

A PRACTICAL TEN-MINUTE WEEKLY RESET

MINUTES 0–2: Review last week’s actual commitments and unfinished essentials.

MINUTES 2–4: Check the coming week’s fixed responsibilities and constraints.

MINUTES 4–6: Choose up to three meaningful outcomes.

MINUTES 6–8: Schedule the next actions with buffers and backup options.

MINUTES 8–10: Decide when and how you will review progress.

PERSONAL APPLICATION • If ten minutes is unrealistic, begin with five; consistency matters more than complexity.

REFLECT / PRACTISE • Practise this reset with your real next week.

DAILY PLANNING THAT PROTECTS FLEXIBILITY

BEFORE THE DAY

Identify one essential obligation, one progress action and one recovery need.

WHEN INTERRUPTED

Reassess what still matters instead of forcing the original plan.

BEFORE STOPPING

Record progress and choose the next starting point.

MONTH-END

Ask whether your routines support your current season of life.

PERSONAL APPLICATION

A shift worker may plan after waking; a caregiver may need variable windows.

REFLECT / PRACTISE Write a two-minute version of your daily review.

EMBEDDING HABITS, BOUNDARIES AND CONTINGENCY PLANS

DESIGN HABITS THAT ARE EASY TO REPEAT

ANCHOR
Attach a new action to an existing routine or reliable event.

MINIMUM
Choose a useful version for low-energy days.

ENVIRONMENT
Make the intended action easier and distraction less automatic.

REWARD
Notice the benefit of follow-through rather than chasing a perfect streak.

PERSONAL APPLICATION
Example: after breakfast, spend three minutes choosing the day's most important next step.

REFLECT / PRACTISE
Which existing routine could anchor a new habit?

BOUNDARIES THAT MAKE PRIORITIES POSSIBLE

ATTENTION: Silence non-essential alerts during a chosen focus window.

COMMITMENTS: Ask what must move before accepting an additional request.

ACCESSIBILITY: Communicate realistic availability without ignoring genuine urgent needs.

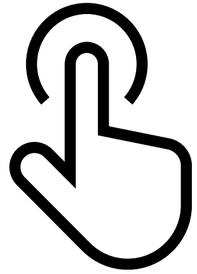

RECOVERY: Treat rest and necessary care as part of the system, not optional extras.

PERSONAL APPLICATION

A boundary can be respectful: “I can do this tomorrow; today I must finish an existing commitment.”

REFLECT / PRACTISE

Which boundary would protect your personal capacity?

WHEN THE PLAN FAILS: A FLEXIBLE RESPONSE PROTOCOL

1. **PAUSE**
   Identify the change: emergency, fatigue, unexpected responsibility or misestimate.

2. **PROTECT**
   Keep safety, essential care and necessary recovery in place.

3. **ADJUST**
   Reduce scope, move a task or use a minimum viable action.

4. **RESTART**
   Choose the next reasonable opportunity without guilt.

PERSONAL APPLICATION

If a family appointment replaces a planned study session, reschedule rather than overloading the night.

REFLECT / PRACTISE

What is your personal Plan B for a disrupted day?

REVIEWING PROGRESS AND CONTINUOUSLY IMPROVING PERSONAL TIME USE

A REVIEW IS A LEARNING CONVERSATION

OBSERVE: What did I actually do, and what changed?

UNDERSTAND: Which conditions helped or blocked progress?

DISTINGUISH: Was the problem a habit, a constraint or an unrealistic expectation?

ADJUST: What is one small change worth testing next week?

PERSONAL APPLICATION • Avoid judging a week only by the number of tasks completed; outcomes and wellbeing matter.

REFLECT / PRACTISE • What did last week teach you about your capacity?

THE PERSONAL TIME INTELLIGENCE REVIEW DASHBOARD

- **STEP 1 AWARENESS:** Did I notice where time went?
- **STEP 2 PRIORITY:** Did I protect at least one meaningful outcome?
- **STEP 3 CAPACITY:** Were commitments realistic for my energy and responsibilities?
- **STEP 4 FOCUS:** Did I create some uninterrupted attention?
- **STEP 5 EXECUTION:** Did I take observable steps?
- **STEP 6 RECOVERY:** Did I preserve essential wellbeing and flexibility?

PERSONAL APPLICATION • Use short notes or a simple 1–5 self-rating; this is a personal reflection aid, not a validated assessment.

REFLECT / PRACTISE • Choose two indicators you would actually review.

CASE STUDY: PROGRESS WITHOUT PERFECTION

START: Ruth planned five exercise sessions but completed only two.

EVIDENCE: The two sessions improved her mood; three conflicted with caring duties.

INTERPRETATION: The plan overestimated capacity; the goal may still be meaningful.

CHANGE: Schedule two sessions and one optional flexible opportunity.

PERSONAL APPLICATION
Successful improvement can mean a smaller, more reliable plan rather than more effort.

REFLECT / PRACTISE
What would you keep, stop and adjust?

REPEATING THE TIME INTELLIGENCE DIAGNOSTIC AND EVALUATING GROWTH

REPEAT THE SAME 24-ITEM DIAGNOSTIC

SIX DIMENSIONS

Awareness, Priorities, Capacity, Focus, Execution and Architecture.

SAME ITEMS

Use the exact Week 1 wording and any reverse-keying instructions.

SAME SCALE

Four responses per dimension, each rated 1–5.

SCORING

Each dimension 4–20; combined total 24–120.

PERSONAL APPLICATION • The questionnaire is developmental and self-reported; it is not a clinically validated measure.

REFLECT / PRACTISE • What changed in your answers, and what evidence supports that?

COMPARE BASELINE AND WEEK 6 THOUGHTFULLY

STEP 1
Record Week 1 and Week 6 totals for each of the six dimensions.

STEP 2
Calculate change: Week 6 score minus Week 1 score.

STEP 3
Identify the largest positive change and one area still needing attention.

STEP 4
Write a concrete example of changed behaviour for each key insight.

PERSONAL APPLICATION
A score can stay stable while awareness becomes more accurate; interpret numbers alongside real examples.

REFLECT / PRACTISE
What is one behaviour you can now describe differently?

TURN ASSESSMENT RESULTS INTO PERSONAL INSIGHT

1. **IMPROVEMENT**
   Which new practice seems to be working?

2. **STABILITY**
   What existing strength should you continue protecting?

3. **LOWER SCORE**
   Did circumstances change, or did your self-awareness become more precise?

4. **NEXT ACTION**
   What single adjustment would be most valuable over the next month?

PERSONAL APPLICATION
A lower rating is not automatically failure; compare the context and the quality of the evidence.

REFLECT / PRACTISE
Write one strength, one learning and one next action.

BUILDING A SUSTAINABLE 30-, 60- AND 90-DAY PERSONAL ACTION PLAN

YOUR NEXT 90 DAYS: THREE PHASES

DAYS 1–30
ESTABLISH

Practise one weekly reset, one daily action cue and one realistic boundary.

DAYS 31–60
STABILISE

Adjust routines for real capacity, interruptions and changing responsibilities.

DAYS 61–90
STRENGTHEN

Review outcomes, retain what works and simplify what is difficult to sustain.

PERSONAL APPLICATION
Do not launch ten new habits at once; begin with a small number of high-value practices.

REFLECT / PRACTISE
Which two practices deserve your first 30 days?

WRITE YOUR PERSONAL TIME ARCHITECTURE CHARTER

MY PRIORITIES: The two or three life outcomes I want to advance now.

MY REALITY: My essential roles, energy limits and non-negotiable needs.

MY ROUTINES: When I will plan, focus, act and review.

MY BOUNDARIES: What I will reduce, defer or respectfully decline.

MY FALLBACK: How I will restart after a difficult or disrupted week.

PERSONAL APPLICATION : The charter should fit on one page and be understandable without any app or complicated tracker.

REFLECT / PRACTISE: Draft your charter in your own words.

GRADUATION: FROM TIME PRESSURE TO INTENTIONAL LIVING

STEP 1 WHAT I KNOW: Time is finite; attention, capacity and values shape how it is used.

STEP 2 WHAT I CHOOSE: A small set of meaningful priorities that fit my current responsibilities.

STEP 3 WHAT I DO: Repeatable planning, focus, action and recovery habits.

STEP 4 WHAT I REVIEW: Progress, wellbeing, constraints and opportunities to improve.

STEP 5 MY COMMITMENT: One action in 48 hours, one weekly review and one 30-day check-in.

PERSONAL APPLICATION • Final reflection: "I will use my time more intentionally by ___, starting ___."

REFLECT / PRACTISE : What is the most important change you will carry forward?

THANK YOU

Any Question?
